VIEWPOINT

By Tim Smith, Chairman, Giddings, TX

Exciting times continue for SimGenetics and the ASA as we move forward to position our members to gain more and more of the cattle market share. This was the major theme by your Board throughout the recent Strategic Planning Session. They developed goals and plans on how this will be accomplished through education and promotion of the array of services, programs, and tools offered by ASA to all members as well as commercial cattlemen.

I am honored and humbled to serve as your Chairman this year and very proud of the additional Trustees and staff who will be working as a team to represent the membership. A major goal for the Board has been to strengthen communication with members and their customers. Each time I have been given the opportunity to write a Viewpoint, I decided to share a few facts and highlights that I found positive surrounding SimGenetics.

The idea was well received, so again this year I thought I should do the same instead of sharing my personal philosophy!

DID YOU KNOW . . .

- 2018 is the 50th Year Anniversary of the ASA, and we will be celebrating with lots of fun and educational activities during our Fall Focus in Bozeman, MT, August 25-29. Everyone is invited to attend and join the festive activities organized by our fantastic staff — watch for more details at fallfocus.org
- “Multi-breed Genetic Evaluation Powered by BOLT™” will soon be released and it is the first multi-breed evaluation completed using single-step. This powerful evaluation predicts EPDs more accurately and it will be run on a weekly basis providing you with updated EPDs and indexes as additional information enters into our database.
- Cow Herd DNA Roundup (CHR) is currently underway, and we have sent over 10,000 DNA cards from more than 200 breeder requests. Call today and order yours to take advantage of the special rates and incentives. Imagine the amount of data that will be collected from this project!
- We just completed our inaugural “Ring of Champions” at the 2018 National Show in Fort Worth, TX, and the Board is looking for suggestions and ideas on how to improve and expand this awards program. Send your comments to ptp@simmgen.com.
- The Steer Profitability Contest (SPC) is currently underway and 24 juniors are involved from nine states with 64 steers on feed. Go to the ASA site, and take a look at the SPC page for new staff, breed representatives, and covers featured breeders in SimTalk.
- In 2017, our registrations increased to 76,720 animals; while in 2016, we registered 75,075 animals. Purebreds made up 34% of the registrations both years.
- The most recent Domestic Semen Sales report from the National Association of Animal Breeders (NAAB) for 2016 indicates that Simmental is the second largest breed for amount of semen sold, and it makes up 11.1% of sales. This is the first time we have ever exceeded 10% of sales. For more information concerning numbers and other breed rankings, visit the NAAB website.
- “PROFIT THROUGH DATA” is a blog easily accessed through the website that was created with the intent of providing information on data submission and tools available through Herdbook Services and much more. Several breeders have commented that this blog really helped by making them more aware of herd management options, how to perform task such as planned matings, and educating them on items including common DNA errors. Check it out and contribute ideas for topics to staff spearheads, Jannine Story and Emme Troendle, or any staff member — they all contribute!
- The most recent evaluation of Average EPDs on purebred Simmental indicates that our breeds average $API and $TI continue to increase. It is interesting to see EPDs for marbling and ribeye increase while EPDs for backfat decrease. Carcass merit is another reason why we will continue to gain more market demand in the commercial industry!
- “HAVE YOU HERD” is another blog available to our membership that it is spearheaded by staff members Leoma Wells and Caroline Wild. The intent of the blog is to inform our members about the most recent information concerning DNA and genetic testing plus THE in addition to other topics. You can access the blog from the ASA homepage.
- THE (Total Herd Enrollment) numbers enrolled for 2017 surpassed 106,900 females with 1,892 herds participating. We are encouraging the membership and commercial breeders to participate in this program to ensure the continued growth of the ASA genetic database. It is known that around 80% of all animal data collected this year came from THE herds.
- Want to get a great bang for your advertising dollar? The circulation of the ASA SimTalk publication exceeds 40,000 mailed copies. Every new buyer of a SimGenetics animal who has a paper transferred to their name automatically goes on the mailing list, and is why the largest portion of the circulation goes to commercial buyers. Just one more reason we encourage you to transfer every animal you sell.
- ASA possesses the largest multi-breed database in the world with nearly 17 million combined records including the Simbrah Breed and our ICS partners.
- “TREC“ is a blog spearheaded by ASA Publication and ASA staff members. This blog is an extension of the Register and SimTalk magazines, but it also covers faces of people involved in SimGenetics. The blog serves the purpose of introducing new staff, breed representatives, and covers featured breeders and enthusiasts. This blog also keeps you up to date on new industry events while keeping you abreast of the most recent DNA testing, genetic conditions, and genetic evaluations. You can access this blog from the ASA website.
- Communication is important to each of your Board of Trustees! The Board of Trustees contact information is listed in the front of each Register and SimTalk issue, in addition to the ASA website. Please feel free to contact us, we welcome your input and suggestions!

This information just touches on a few of the progressive and positive happenings with SimGenetics and ASA that keeps my adrenaline flowing and momentum building while reassuring my commitment to our Association and breeds of cattle. We have access to the science, data, and tools needed to ensure our continued growth of SimGenetics and their growth within the beef cattle market share!
Value-added SUPERIORITY

ISM00166 HOOK'S BALTIC 17B

BALTIC

Reg#: 2854454

GW-WBF Substance 820Y x Dikemans Sure Bet

› Moderate birth weight and substantial growth coupled with breed-leading ADG, CW, MARB, REA and SHR make Baltic a profitable choice no matter whether you’re selling calves by the pound or retaining ownership.

› You will love the Baltic females. His breed-leading STAY and DOC, backed by proven sires Substance and Sure Bet, mean his docile daughters will be in your herd for years to come.

› Homozygous Black, Homozygous Polled

By Emme Troendle

A Fleckvieh breeder focuses on providing the best genetics for the commercial cattleman.

In the 50-year history of the American Simmental Association, progress has traditionally relied on performance, genetics, and working for the commercial cattleman. Jerry Brink, Brink Simmentals, who, with his family, maintains a diversified cattle, hog, and farming operation in Elkader, Iowa, is among those breeders who embody the philosophy a half century later.

“As purebred breeders, we have two responsibilities,” Brink shares, “One is that we have to create a genetic package that is going to provide the commercial cattleman some profit. The other responsibility is that we have to create individual cattle that will improve our breed.”

Brink Simmentals, situated in the “Little Switzerland” region of Northeast Iowa, is home to 110 Fleckvieh cows, 500 sows, and a locally-sold, farm meat shop. The operation is 1,200 acres split between pasture and crops. To maintain a prosperous operation, Brink focuses on developing the most effective herd genetics and providing the best customer service for the commercial cattleman.
They also handle all the marketing and sale aspects. James, the oldest brother, is in charge of the agronomy for the corn, soybeans, and hay. George, Brink’s older brother, manages the feed mill along with daily operations. Wanda manages the meat shop, cooks meals, and helps out wherever needed.

Maintaining the Breed

The first seven Fleckvieh cows Brink purchased were from five different foundation cow families. For the last 30 years, he has increased the herd size to 110 cows using a majority of all the same bloodlines. “We haven’t left our original cow families, and if we bring in new blood it’s on the back of a proven cow. We will use the offspring out of the proven cow to incorporate new genetics if we like how they develop,” he says.

The majority of the cows are pasture bred in a tight 60-day window, from April 15 to June 15. The herd sires are selected from their own genetics and are used in single-sire groups to ensure the correct linebred crosses between half-siblings. Brink shares, “The homozygosity the bulls possess, that we are developing, is very important to the genetic package that the commercial cattleman utilizes. The offspring are more uniform, and with our buyers getting the first punch of heterosis, we provide the customer much of the performance.”

Finding Fleckvieh

The original Brink farm dates back to the 1950s with Brink’s parents, Joe and Wilma. In the beginning, the farm produced purebred Hereford seedstock cattle. Brink says, “My dad was into Herefords, it wasn’t until the 80s that we started developing a Fleckvieh herd.”

When Fleckvieh were introduced, Brink and his father managed the two breeds separately to retain purity between bloodlines, and the Fleckvieh herd was maintained on a small scale until the 90s. Brink explains, “We decided it would be easier to have one breed. Simplifying the herd management made the most sense, and the Fleckvieh market was expanding.”

When Brink started using purebred Hampshires as 4-H projects, the farm began breeding and selling Hampshire boars. Brink’s swine genetics were sold throughout North America, Japan, and Korea, but in the 90s, as the hog industry changed and as the small family pork production went to the wayside, so did their market. To meet the changing demands, the Brinks expanded to 500 sows and raised replacement gilts to match the boars. Today they have a Hampshire seedstock and commercial hog operation. Brink summarizes, “Our swine operation is farrow to finish. We farrow, breed, and sell market hogs and breeding stock.”

Ten years ago, the Brinks started a retail meat business. Every Friday and Saturday from May to October, Wanda, Brink’s wife, makes trips to the farmers market held in Dubuque, IA, the oldest farmers market in the state, to sell their Hampshire pork and Fleckvieh beef. Back on the farm, the meat shop is a walk-in freezer with a display and service area, open year around.

To handle the wide variety of tasks that go into making the farm profitable, the family splits responsibilities between each person. Jerry and Preston, his son, manage all of the genetic and selection decisions for both the hog and cattle operation.

Interested parties review the list, and call Brink prior to the sale to have their name written underneath the bull that they are interested in by choice preference. The sale order is by most preferred to least preferred bull, and by adding in the first-call policy it makes it fairer for the buyer. “Say for example that the bull was priced at $4,000 as a starting price, the first guy that called me and put his name on the bull starts at $4,000, and the next guy that called gets the next bid, around the horn,” Brink says. “Our customers like the personal connection we offer through our sale and find it very accommodating.”

Brink concludes, “The Germans and Austrians did an excellent job developing this dual purpose Fleckvieh breed of meat and milk. With our linebreeding program, we’ve continued to promote the Fleckvieh breed, and in return, advance our own herd. These evolved Fleckviehs create heterosis in the American population, attain early maturation, achieve accelerated lean performance with muscle and strong maternal characteristics. We have also basically eliminated the backgrounding step for commercial producers. This is why we are so excited about the economic advantages this breed offers.”

(Continued from page 9)
LLSF Pays To Believe ZU194  
ASA#: 2659897 • Pays To Dream x Trademark  
Homozygous Black/Heterozygous Polled  
Payments To Believe is the spectacular 2015 NWSS and 2014 NAILE Grand Champion Bull! His first calves are averaging 5 digits in public auctions and his full-sib sisters averaged $16,000 in Lee’s 2014 fall sale.

Grace Erickson, AJSA member and high school student from Bolivar, MO, recently won an essay competition sponsored by BEEF magazine. The contest was hosted by Jered Decker, author of the blog, A Steak in Genomics, and sponsored by BEEF magazine, Zoetis, and GeneSeek®. The essay contest is part of the "Identifying Local Adaptation and Creating Region-Specific Genomic Predictions in Beef Cattle" funded by the USDA-NIFA.

Beef genetics extension specialists, breed association staff, and trade publication staff judged the essays, including ASA’s Director of Science and Education, Jackie Atkins. Atkins shares, “It was impressive to read the essays and to hear in their own words, how science and technology can improve animal breeding decisions. You could tell some of the participants really understood the benefits of using technology to make more informed decisions about beef cattle selection.”

The winning essay was recently published in one of BEEF magazine’s online newsletters. The 2nd through 5th place essays will be published on A Steak in Genomics, and cash prizes were awarded to the top five essay contest winners. The following are the second through seventh contest winners: second place: Jackson Barry, Canton, MO; third: Jacob Jones, Stillwater, OK; fourth: Brooke Falk, Harveyville, KS; fifth: Brooklynn Salo, Laramie, WY; sixth: Wesley Denton, Blue Rapids, KS; seventh: AJSA Board of Trustee, Garrett Stanfield, Manchester, OH.

Here is how Erickson answered the question, “What does it mean to be a beef breeder in the 21st century?”

Beef is the top of the human food chain. People love it, and if we producers do our homework, it should stay at the center of the plate for a growing global population. Back to Biblical times, owning and breeding “the cattle on a thousand hills” has been a respected role in society. Over the centuries, breeding and improving cattle became an art, with families passing their production systems, improved stock, and hard-earned knowledge from one generation to the next.

Lately though, change has come rapidly, with all the innovation of modern science and technology being used to produce better beef, more efficiently, in ecologically and economically sustainable ways. Here is what I believe for the future; breeding beef in the 21st century will be just like it always has been, except totally different.

Let me explain. Some things are not likely to change too much. Beef production, especially seedstock improvement operations, cost a lot of money to start and maintain. Generation turnover for genetic improvement in our herds is slow, with females not even weaning their first calf until they are almost three years of age.

Land ownership in the United States is dispersed and likely to become even more so. Profitable returns can be low and unpredictable. Feeding hay in the dead of winter in North Dakota is not for the unmotivated or lazy. Getting cows bred on endophyte-infected Missouri fescue or Florida summer heat and humidity is not work likely to be taken over by unskilled, hourly wage earners.

Part of the reason improvements in efficiency, uniformity, and carcass have come so fast in chickens and pigs is because they are all raised inside, at the same temperature, and eating the same feed. But it is hard to believe that environmental, climate, and feedstuff resources could ever be normalized across the geographic and environmental diversity inhabited by our nation’s cowherd.

The point is that 21st century genetic improvement in the beef business is likely still to be carried out by a diverse group of independent-minded, tough, family owner-operators whose strong opinions and daily “ways of doing things” have evolved from generations of working a specific herd on a given piece of land. They will continue to view their job as an almost sacred, time-honored trust of creating the best food source possible with the least inputs, in a way that ensures their own families’ futures. They will work long hours in sometimes extreme conditions and the habits and routines that have evolved on each farm and ranch will rightly continue to be respected. “Great Grandpa and...
Grandma always did it this way” really means something when you step back and realize that they often carved out and paid for these land bases from next to nothing.

Nobody knows the future, but seedstock and commercial breeders will honor the past while preparing themselves to survive and thrive long into the future if they follow these steps:

Embrace change. Honoring tradition and being bound by it are two different things. It is a competitive world, and raising protein for people to eat is not that different than other industries like developing and building cars, computers, or TVs where smart people use sophisticated information and technology to upgrade their product every single year.

Observe, record, analyze, and utilize as much information as possible. If a trait can help you make money and it is measurable, then measure it, compare it, and use it to make future mating, management, and marketing decisions.

Crossbreed. I recently heard Chip Kemp of the American Simmental Association say that two-breed cross systems yield roughly 300 more pounds of calf than straight-bred over a cow’s lifetime, at almost no additional cost, while four breed crosses yield roughly 500 pounds more. That tells me that commercial breeders should be crossbreeding and that seedstock folks should be creating compatible purebreds as well as composites to allow one-stop shopping for their customers.

Use EPDs and selection/economic indexes to make important breeding decisions. I will be honest. I show cattle and I LOVE it! Even at home, looking at a well-constructed, good-footed, big bodied, easy-doing cow seems to stir emotions in me that can only have developed over the centuries that my family has tended livestock.

But performance systems have become so powerful, accurate, and meaningful over the past 40 years that not using them at least to select bulls is like leaving free money on the table. My great-great grandfather ran 15 or 20 beef cows on his small farm in northern Illinois about 100 years ago. If he could have opened a book just like the old Sears catalog and looked at a number (calving ease EPD) that would help him pick a bull that might let him wean an extra calf or two every year by being born easier, I am betting he would have waited by the mailbox for that book every spring. He would have probably been amazed to know that the information contained in the book was free for the taking and using.

Use genomic testing in the way that economically applies best to your operation. My family raises seedstock and for us that means a 50K DNA testing for all donors and possible sires is always performed. “Either/or” traits like polled, color, and genetic purity have obvious value.

It’s even better that these tests can improve the accuracy of EPDs as much as 10 or 12 calves would. The added accuracy might give us just enough knowledge to keep us from a calving difficulty “wreck” or help choose that one bull that might let him wean an extra calf or two every year by being born easier, I am betting he would have waited by the mailbox for that book every spring. He would have probably been amazed to know that the information contained in the book was free for the taking and using.

Use genomic testing in the way that economically applies best to your operation. My family raises seedstock and for us that means a 50K DNA testing for all donors and possible sires is always performed. “Either/or” traits like polled, color, and genetic purity have obvious value.

It’s even better that these tests can improve the accuracy of EPDs as much as 10 or 12 calves would. The added accuracy might give us just enough knowledge to keep us from a calving difficulty “wreck” or help choose that one bull that might improve fescue tolerance, carcass traits, or whatever matters to us. A commercial operator might decide to always buy bulls for pasture use that have been gene tested, or test their own herds to sort cows into management or breeding groups.

Do what works for you. Using technology and information systems has to be simple enough to work in practice. It is amazingly easy to view a bull’s $API before buying him. A DNA test is as easy as plucking a hair, or pulling a blood sample.

But I understand that sometimes decisions must be made based on labor efficiency, and not all data can be collected and recorded on every farm. In a large scale commercial operation, it might be difficult to measure each birth weight, but very simple to record calving ease scores, birth dates, and calf survivability on each and every birth on the farm.

Record data every year on every cow you own. The days of just recording the bull calves you plan to sell are over. Total herd enrollment has to be a part of improving fertility and longevity traits for seedstock as well as commercial operations.

Calf birth dates, calving ease score, and noting when and why a calf or cow left the farm is simple and very inexpensive to track, but yields huge benefit to within-breed or across-breed databases and improve the value of EPDs.

Breed to proven sires through artificial insemination. A sire with a Terminal Index of $100 stands to bring in an added $40 per calf compared to a sire with a $TI of $60. That’s a $4,000 difference on each 100 calves, but that is the tip of the iceberg.

If genetic proofs help avoid the death of one calf per season due to dystocia, or keeps you from using a bull whose daughters leave the herd early, the benefit to the farm’s profitability and sustainability is hard to even figure. For a registered outfit like mine in the Midwest, we like to A.I. every heifer and cow, while more spread out, commercial herds might prefer to heat synchronize and time-breed replacement heifers only.

Find a way to be paid for the added genetic potential of your cattle. Let’s be honest, improving carcass traits and even daily gain after weaning does not add profit, efficiency, or sustainability to a commercial herd selling steers at weaning to a buyer who doesn’t understand their value. So, either through retained ownership or data/feedback-influenced marketing, cow-calf producers have to get paid more or pay less in feed and medicine to continue to take on cost to improve these traits.

PredicGen and GeneMax Focus are trademarked and commercially available products that allow selection for feedlot and carcass traits but also give buyers concrete evidence for better daily gains on feed and carcass quality. The first allows for selection of females with superior marbling, yield grade, tenderness, and value. A study found that when pre-selected and bred to Angus sires sorted for carcass by EPD resulted in a $113 carcass grid premium in one generation over non-selected mates. The other product is a gene-based test which seems to build on the first by allowing a group of feeder calves’ DNA to be screened for marbling and feedlot growth. Value is added because calves can then be sorted into the right feeding system and grid-based endpoint. As long as feedlot buyers understand the value of the tests, value flows to the breeder with or without retained ownership.

Use new technologies. My grandma talks about her childhood without indoor plumbing or electricity in the house. Today, I am a high school student and during the fall calf sale season, a friend of mine and I meet in study hall twice a week to look at pictures and videos of sale cattle on our smartphones, most with a link to their pedigree, cow family, and genetically-enhanced EPDs.

There is even a genomic test listed on most show steers to predict how much hair he is expected to grow! We track the progress of sales throughout the fall and Dad has bought me a heifer on an E-bid on the smartphone. I use the same phone to input birth dates and weights, calving ease scores, weaning weights, reproductive tract scores, etc. Technologies for beef improvement are getting cheaper, easier, and more effective every year and failing to utilize them makes about as much sense as not having lights in the house.

The last thing I think will be a critical use of technology and information for breeders but does not really involve genetics or production and carcass traits. My Dad told me about a store in Norway where a steak or package of ground beef can be barcode scanned by a shopper, which brings up a picture of the farm the steer was raised on along with his health and feeding history.

(Continued on page 18)
My great-great grandpa’s customers knew and trusted him. They drove their wagons past the calves in his fields almost every day. That’s not the way it is now, when folks are far removed from the farm and think that chocolate milk comes from the black cows. But people are still willing to buy more, and pay more for something they eat when they know where it came from and what it’s been through, and when they see that producers are working hard to raise them right. More and more information will be kept, stored, and made available to consumers as time goes on and we should lead the way, not fight it, when it can be done fairly and affordably.

It is an exciting time to be in the beef cattle business. Prices will go up and down, like we have seen this past year. Cities will get bigger, and they will eat up land along the way. But we have the honor of working with some of God’s greatest creatures to provide quality food for a growing world population, while at the same time making a living. Cattle breeders in the rest of this century will use information and technology together with our time-honored traditions to get the job done using less land and with less environmental impact than ever before. I look forward to learning more as I start college next year and to playing my part as a beef breeder in the 21st Century.

---

**COW SENSE**

Listed below are ten questions designed to test your knowledge of the beef industry.

**Elite:** 9-10 correct; **Superior:** 7-8; **Excellent:** 5-6; **Fair:** 3-4; **Poor:** 1-2.

1. What are the three divisions of the small intestine?
2. What is the normal rectal temperature of cattle?
3. What is the raw source of Vitamin A found in feedstuffs?
4. What is the term used for describing a sterilized heifer?
5. What does the “top side” of a pedigree refer to?
6. How many upper incisor teeth does a cow have?
7. Who was the longest-serving EVP of the American Simmental Association?
8. In what European country did Charolais cattle originate?
9. Who is ASA’s Director of Programs?
10. What is the science that involves the study of the hormonal system?

**Answers:**

1. Duodenum, jejunum, ileum;
2. 101.5 F;
3. Carotene;
4. Spayed;
5. The paternal ancestors;
6. None;
7. Earl B Peterson (12 years);
8. France;

Embrace the Past,

As ASA celebrates 50 years, we look to the past, and how it shapes our future. This month’s issue is the fourth installment in a year-long series, focused on Golden Memories

Coordinated by Lilly Platts

Herd Handler History

“Although the program was developed by the American Simmental Association, it is not specific to Simmental or Simbrah records. The system shows great promise for seedstock and commercial breeders. Since this program tracks breed percentages, it is ideal for composite breeding programs.

Within two years, the Association could easily double the amount of records that are processed. Additionally, future phases will include the Association features so the basic program will be used by the Association as it updates its internal processing system.”

In the September 1994 issue of the Register, a question and answer article introduced the new Herd Handler program. The above excerpt appeared as part of that piece.

Prior to the implementation of Herd Handler, various methods were used to keep records. The first records were handled by Boeing Computer Systems, Seattle, Washington.
Imagine the Future

revisiting historically significant documents, articles, and photographs, in addition to hearing from those involved about the significance of this history.

Golden Opportunities

ASA’s Steve McGuire was involved in the implementation of the Herd Handler program as well as today’s Herdbook system.

“In the early 1990s before the internet, ASA was looking for a way to give more access to members to the pedigree, EPD, and herd records in the Simmental database. In addition to submitting paper forms, the Association already provided members two ways ways to send herd records and registration requests electronically using a spreadsheet template or with the simple Calf Key program we developed. Both of these electronic systems used a diskette (or floppy disc) to record data. The diskette was then mailed to the Association where data and registration requests were processed.

Starting with discussions in 1992 and 1993, ASA began the development of a software package named Herd Handler Performance Software to be distributed on a CD-Rom. Introduced in the mid 1980s, CD-ROMs provided a way to store a large amount of information on portable media. The Herd Handler program did 3 things: 1) it was a cattle herd management/inventory system, 2) it contained pedigree and EPD information on all animals in ASA’s database and 3) it provided a way for members to easily send and receive herd records and registration requests to the Association. This was revolutionary effort; no other breed Association released their entire database for searching and displaying pedigrees and EPDs on all animals. And it could be done from home using a PC (personal computer).

The first release of Herd Handler Software went out in 1994 and remained an active product until 2009. During this time, ASA sent new CD-ROMs to every Herd Handler subscriber two times a year with program updates and the latest copy of ASA pedigree and EPD database. ASA sold the Herd Handler program for $500. The annual subscription fee was $100. Although very popular with many of the members who purchased the program it was not widely adopted. Only about 500 programs were sold and there were never more than around 300 subscribers for the biannual updates.

Ultimately, the internet proved to be more convenient and timely, replacing the value and usefulness of a CD-ROM. ASA started developing its internet system in 2003 and this eventually replaced the Herd Handler Performance Software on CD-Rom; however, much of the thinking and design in Herd Handler Performance Software was the basis for ASA’s Herdbook website.”

Steve McGuire

revisiting historically significant documents, articles, and photographs, in addition to hearing from those involved about the significance of this history.
In addition to the quiz, the inaugural bred-and-owned bull class will be introduced at the 2018 Classic, and the Steer Profitability Contest will be included as an additional cattle competition in the overall points calculation.

**Jessica Aggen, Event Coordinator:**

Jessica Aggen and her husband, Matt, are co-owners of Oak Meadow Farms, Harmony, MN. Aggen was born and raised on a diversified livestock operation in west-central Minnesota and has worked in the banking industry for the last 20 years. She is currently the Vice President/Ag Lender at First Southeast Bank in Harmony.

The Aggens farm with Matt’s family, and live near the original farm where he grew up. Oak Meadow Farms, a 120 head operation, sells bred and open heifers at the North Central Sale and the South Dakota Simmental Source Sale. Additionally heifers and bulls are sold private treaty.

Jessica and Matt are the proud parents of two sons: Hunter, who is a freshman at South Dakota State University; and Garrett, a sophomore at Fillmore Central High School. Active cattle enthusiasts, both sons have exhibited cattle at 4-H, FFA, and AJSA events in addition to the National Western Stock Show.

**Committee:**

Very similar to the 2015 North Central Regional Classic, tasks are being delegated between a large number of MSA and MJSA volunteers. Aggen says, “We are so thankful for all the Minnesota members that have jumped in to help make this a successful and meaningful event.”

**Committees are as follows:**

**Fundraising:** Michelle and Tony Rossman, Val and Lori Eberspacher

**Grounds and Maintenance:** Paul Krueger, Bill and Stephanie Krause
Marketing and Decorating: Donna Moenning and Kami Schoenfeld
Contests: Kelly and Mike Schmidt
Meals and Hospitality: Brenda and Dave Markegard, Tim & Kari Johnson
Ceremonies/Entertainment: Natasha Mortenson, Marilee and Daryl Peterson, and Stacie Mueller
Office Staff: Cindy Krueger and Ethanie Schmidt
Coordinator and Finance: Jessica Aggen

Hotel Information:
The headquarters hotel Radisson Hotel, Roseville, five miles from the Minnesota State Fairgrounds, with overflow selected at three other locations. Following are the options:

Radisson Hotel Roseville
2540 North Cleveland Avenue
Roseville, MN 55113
1-855-516-1090
Group Name: MN Simmental Association
Deadline: June 4, 2018
$109/night

Residence Inn
2985 Centre Point Drive
Roseville, MN 55113
651-636-0680
Group Name: 2018 National Jr Simmental Show
Deadline: June 1, 2018
$99-$149/Night
Amenities: Free breakfast, parking, exercise room & pool

Hampton Inn
2050 Iona Lane West
Roseville, MN 55113
651-209-3000
Group Name: 2018 National Jr Simmental Group
Deadline: June 2, 2018
$104/night
Amenities: Free breakfast, parking, wifi, exercise room and pool

Courtyard by Marriott
2905 Centre Point Drive
Roseville, MN 55113
651-746-8000
Group Name: 2018 National Jr Simmental Shows
Deadline: June 1, 2018
$99/night
Amenities: Free breakfast, parking, exercise room and pool

Judging Competition and Cattle:
Kyle Rozeboom, University of Minnesota Judging Team Coach and Livestock Specialist and his staff have been integral in handling the judging contest, with cattle supplied by local Minnesota Simmental breeders.

Local Attractions:
St. Paul and Minneapolis, better known as the Twin Cities, are separated by the Mississippi River with a combined population of 3.2 million people. There are many famous attractions including: Mall of America, the Minnesota State Capitol Building (located approximately three miles from the fairgrounds), Como Zoo (a free entry zoo and conservatory located approximately one mile from the fairgrounds), Valley Fair (an amusement park), and many museums, art galleries, and historic centers.

“Sports fans will also appreciate the fact that the US Bank Stadium, built in 2017, was host of Super Bowl 52 and Target Field is the home of the Minnesota Twins,” shares Aggen.

New Rules for 2018 Regional and National Classics

Registration Fees and Deadlines
Fees are located within each Classic schedule. Regional Classic entry deadline is May 7, 2018, at 4:30 pm and late registration deadline is May 14, 2018, at 4:30 pm. Entry fees double after the early-bird deadline. National Classic entry deadline is May 14, 2018, at 4:30 pm and late registration deadline is May 21, 2018, at 4:30 pm. Entry fees double after the early-bird deadline. All deadlines are 4:30 pm Mountain Daylight Time.

Exhibitors Will Compete in Four Out of Five Educational Contests
A new educational contest will be added at Regional and National Classics. The Genetic Evaluation Quiz will consist of fifty multiple choice, matching, and true/false questions that will test exhibitors’ knowledge about using genetic evaluation data to make decisions. Study materials will be posted at www.juniorsimmental.org, and Sire Source will also be great study resources. With the addition of the Genetic Evaluation Quiz, exhibitors will now enter a minimum of four out of the five educational contests when they submit entries for a Regional or National Classic. Overall competition points will be determined by points won in five of seven events: Cattlemen’s Quiz, Genetic Evaluation Quiz, Public Speaking, Livestock Judging, Sales Talk, Cattle Show, and Showmanship.

Be On Time For Contests and Cattle Classes
All educational contests must be completed by the contestant at the scheduled time. Failure to do so will result in disqualification of the contestant from the contest, and the contest will not count in the educational requirement to compete in the cattle show. In the cattle show, once a class has entered the ring and the first entry has begun to circle, no further entries will be allowed to enter the ring. If an animal gets loose three times in the ring throughout the course of the show, they will be dismissed from that show and ineligible to receive awards. In showmanship, once the first animal has begun to circle, no further entries will be allowed to enter the ring. If an exhibitor misses their heat of showmanship, the exhibitor will not be allowed in another heat and will be disqualified from the contest.

Animal Registration and ET Calf Requirements
Every animal must be ASA registered prior to submitting entries to any Regional or National Classic. Registration ownership date must be on or before the day the exhibitor registers for the Regional or National Classic. If DNA requirements for an ET calf have not been completed prior to entering for any Regional or National Classic, the ET calf must be placed on file in the database, assigned a number in parentheses (pseudo-number), and DNA received and recorded at the lab (GeneSeek). Any DNA issues must be resolved and the ET calf registered with the certificate in hand prior to check-in. The certificate must be produced at the time of check-in.

Bred and Owned Bull Show Added
Bred and Owned bulls will be exhibited at Regional and National Classics in 2018. Bulls calved after September 1, 2016 and before March 15, 2018 are eligible. There will not be a class for 2-year-old bulls. Bred and Owned bulls must have been bred by the junior member/exhibitor, but may be owned jointly with an adult/farm, provided that the junior/exhibitor is the sole breeder, original owner of record, and is officially recorded as a current owner of that bull. Bulls 12 months of age and older must be shown with a nose lead or ring. Bulls will not be allowed to show in showmanship.

Regional vs National Cattle Show Points
Top ten exhibitors at the Regional Classic cattle show receive points. Simbrah, Fullblood, cow/calf and steer entries must equal 15% of the largest heifer division or the available points for those divisions will be reduced by 50%. If a division receives half points, only the top five animals will be placed in the ring. At the National Classic, all Bred and Owned shows, Simbrah, Fullblood, cow/calf, and steer divisions must equal 15% of the largest heifer division or the available points for those divisions will be reduced by 50%. If a division receives half points, only the top ten animals will be placed in the ring.

Steer Profitability Competition Cattle Eligible for Overall Points
Steers entered and accepted into the SPC Program are eligible for overall points. The total number of steers in the SPC Program must equal 15% of the largest heifer division or the available points will be reduced by 50%. If half points are received, only the top ten animals will be used in the overall scoring.

Novice Competitor Age
Novice competitors must be 5 years old on or prior to January 1, 2018, and have not reached 8 years old on or prior to January 1, 2018. Visit juniorsimmental.org for the full list of 2018 Regional and National Classic Rules.
General Information

North Central Regional Classic, June 12-16
Illinois State Fairgrounds, Springfield, IL
Hotels: Holiday Inn Express, 217-529-7771
Camping: Available on fairgrounds

South Central Regional Classic, June 13-16
Washington County Fairgrounds, Fayetteville, AR
Hotels: Courtyard Marriott, 479-571-4900
LaQuinta Inns & Suites, 479-587-8600
Camping: Available on fairgrounds, $25/day

Sale Chairman, Fred Swain wants to personally thank all of the advisors, purchasers and donors for their support of our youth.

The eighth annual Embryo/Fun Auction to benefit future AJSA Eastern Junior Regional Classics and to encourage Eastern Regional states to step up and host a Regional Classic was held in conjunction with the 2017 NAILE event.

According to organizers about $11,130 was raised in the effort, and plans call for the total proceeds to be allocated to future AJSA Eastern Regional Classics.

A total of about $94,000 has been raised in the eight years of this event to fund our Eastern Regional Classic. In addition another $10,000 has been donated to the Eastern Fund by the Mississippi Junior Simmental and Simbrah Association. Thank you to all of our supporters.

Please make certain that as we visit with these individuals that we thank them for their contribution to our youth and the AJSA Eastern Regional Classic.

Individuals or groups interested in participating as donors, purchasers or hosts for the AJSA Eastern Regional Classic may obtain additional information by contacting Dr. Fred Swain at 502-245-3866 or at frederickswain@bellsouth.net.

These funds are available by request for the AJSA Eastern Region Classic host states and hopefully, will encourage the Eastern Region to see themselves as a group working for the Eastern Juniors.

Massachusetts is inviting us to put this all to work at the AJSA Eastern Region Classic in Springfield, June 20-23, 2018.

Let’s all be there!!

Thanks again!!

Carcass Merit Sire Evaluation Program
Each year, bull owners commit thousands of dollars to get unbiased evaluation for the next generation of genetically influential young candidate sires. For SimGenetic users, this information is critical for building significant accuracy for economically important EPDs.

April 2018
Herdbook Services offers hands-on registration capabilities. You enter the data, work through any errors, pay the fees; registration will be completed in minutes. No priority handling fee, no hold-ups (unless there are errors or payment is needed) and can be completed any time of the day or night.

Interesting fact: 90.8% of the animal data is already submitted electronically through Herdbook Services!

Why the encouragement to go online and register the animal yourself?
1. To avoid the priority handling processing fee. This fee will increase to $50 starting March 1, but why pay this fee when you can go online and complete the work yourself?
2. Complete the registration online and if you need it mailed by FedEx or UPS send a request via email (simmental@simmgene.com) for special shipping. Note: there is a charge for shipping unless mailed by regular US Mail. Plan ahead and avoid those charges.

Need more encouragement to register online?
1. Normal processing (registration) on paper applications for SimGenetic animals (once received in the ASA office): 3-7 business days (error-free and payment received) depending on the time of year — holiday season could extend longer.
2. Mailing services: within three days of processing (registration) plus the length of time for the US Mail service.

The Customer Service Specialists are just a phone call away to assist you.
1. There are peak times and days where there are large volumes of calls (especially as it closes in on a deadline, you are not alone if you are one who waits until the last minute).
2. If you are unable to get through, feel comfortable leaving a voicemail. Our goal is to return calls as soon as possible, normally within 3-4 hours. If your question can be answered by email, send an email instead of a voice message to:

   simmental@simmgene.com for general questions or priority handling
   dna@simmgene.com for DNA or kit requests
   the@simmgene.com for Total Herd Enrollment (THE) (option A & B)
   members@simmgene.com for applying for membership or annual service fee questions
   carcdata@simmgene.com for Carcass Merit Program (CMP) and Total Herd Enrollment (THE) (option C & D)
   ultrasound@simmgene.com for ultrasound and barn sheets

To help you plan, here are some items which may hold up registration for a length of time:

1. DNA / Genetic Abnormalities / Parental Validation / AI Sire / ET Requirements: DNA Testing is a standard process without any options to expedite this service.
   a. Normal DNA Testing: 3-4 weeks for results.
   b. DNA kit paperwork requests: 48-hour turnaround
   c. DNA kits mailed out daily
   d. Results uploaded daily as they become available from GeneSeek

2. Non-Compliance: Total Herd Enrollment breeders: there is a deadline each year where the previous year’s calf data or a reason why no calf data was reported must be submitted. You’ll be notified of the dams in your herd which need additional information when you go on-line to submit new registrations. Until this information is completed, no new data will be accepted.

3. Foundation Registration: Sires registered with other breed associations MUST be registered with ASA prior to registering progeny. Other breed dams may be registered with ASA as Foundation, but it is optional, not mandatory. Normal processing 10-12 business days (error-free, payment received, DNA requirements completed).

4. Breeder Signature: The owner of the dam at the time of conception is required to sign as breeder. If the applicant and breeder are different, make sure you have breeder’s signature on the calf’s registration application or breeding information is supplied on the transfer of the dam. If it was sold with calf at side, make sure the seller has registered and transferred the calf to you.

5. Non-payment: Payment is required to complete registrations.

Priority Handling Processing Service:
ASA offers priority handling services if you are unable to complete your registration online. If the data is error-free and payment is received, normal turnaround time for registration is within two business days. There is a priority handling processing fee $50 per animal. Regular US Mail service is at no charge, however, other mailing services (i.e. FedEx, UPS or Express Mail) will incur additional charges.
Members, do you know a commercial operation with accurate and consistent records? Do they retain ownership of the calves or have an interest in collecting carcass data? Would they like to get paid to use some of the most promising young bulls in the industry? Maybe you have a commercial herd of your own that could work as a cooperator herd for the ASA’s CMP. Spring or fall calving.

Incentives for Cooperators

- Free semen from the industries top herd sire prospects
- All cows in herd will be put in ASA’s database which will provide EPDs for every female. This allows you to make selection and culling decisions within the cow herd based on EPDs.
- You have the option to retain all or some of the females produced from the program.
- ASA will pay $60/AI sired carcass that is harvested.
- Cooperators will get carcass data back on all the calves harvested through the program.
- A portion of the CMP calves have feed intake collected and records shared with the cooperators.

How does it work?

- ASA assigns all matings in a random fashion so that the test produces unbiased, accurate results.
- ASA will work to provide bulls that fit the general criteria of your herd. However ASA must use only bulls that are enrolled in the program.
- At least two sires will be used per contemporary group and ASA likely will use several sires per contemporary group to provide better more accurate test results.
- Only bulls with high calving ease EPDs are used on heifers.

Qualifications

1. All cows will be individually identified along with birth year and approximate breed makeup.
2. Collect birth weights, calving ease scores, and weaning weights on CMP sired calves.
3. Beneficial but not required — have a current AI program established.
4. Must commit to collecting carcass data.

Contact Jackie Atkins or Jannine Story for more information at 406-587-4531.

“Participating as a CMP cooperative herd for nine years has enabled us to get the hard facts on feeding efficiency and harvest value by traits on our calves. As a commercial cow/calf operation, interested in making genetic progress in the cow herd, we have used the data in replacement selection and are seeing a difference in our bottom line.”

Lynda Stuart, Stuart Land and Cattle Co.

“We are glad to be part of the CMP program. It provided us with top quality calves while we get to participate in improving Simmental genetics.”

John Hall, Ph. D., Professor and Extension Beef Specialist and Superintendent at University of Idaho Nancy M. Cummings REEC.

FROM THE HEADQUARTERS

By Jackie Atkins, Director of Science and Education

Choose Know!
ASA’s novel programs provide breeders and commercial cattlemen with more information to make better decisions.

We are anticipating another momentous year with so many positive programs happening at the American Simmental Association.

Carcass Merit Program (CMP):
We have grown the CMP over the last year and are looking forward to expanding the number of bulls we can progeny test. Collecting individually identified carcass records is vital to increase the accuracy of the EPDs for carcass traits. The CMP places bulls with several cooperator herds who commit to collect calving records (calving scores, birth weights, and dates), weaning weight records, and on all the way through to harvest. The CMP also collects DNA on most of the calves, so we can continue to improve our genomic predictions of carcass traits. The CMP is also collecting individual feed intake data on several hundred calves each year. This data is clearly beneficial to the breeders who enroll bulls in the program, and it also improves the accuracy of all the relatives of these bulls — read a majority of the SimGenetics population. The emphasis placed on collecting actual carcass records is imperative to continue to accurately gauge genetics for carcass traits.

Fall Focus and 50th year celebration: This year the fifth annual Fall Focus will be in Bozeman, August 25-29. We have fun and new activities planned along with our educational symposium and open board meeting. Saturday, August 25, will be a social day starting with a golf tournament at a par-three course followed by tours of the office. New this year, we will have a Herdbook hands-on learning session geared toward teaching breeders how to upload records, use active herd and reports, proper DNA protocols, and other aspects that could help ASA members become more comfortable with Herdbook services. The Herdbook tutorial will be on Saturday August 25 at the ASA headquarters. Saturday evening, we will have our official 50th year celebration at the headquarters, including dinner, conversations, and live music. The education and interaction will continue with the educational day on August 26, prime rib dinner and social in the evening, and open board meetings on August 27 and 28. Watch for more details at fallfocus.org in the upcoming months.

IGS Multi-Breed Genetic Evaluation: After four years of monumental work the IGS group collectively has done to fully implement the new genetic evaluation powered by BOLT software, we are preparing to fully switch to the new evaluation system. The new and improved evaluation predicts EPDs more accurately and uses the genomic data better than the previous evaluation. Not only is the evaluation more powerful, it can be done on a weekly basis providing you with updated EPDs and indexes as additional information enters into our database.

Cow Herd DNA Roundup (CHR): As of the beginning of March, we are sending in DNA samples from the participating CHR herds to GeneSeek® and fielding the results. This project will greatly increase our number of whole herd female genotypes in a short amount of time. The improvements to our genomic predictions will benefit the entire membership and cattle in our genetic evaluation.

Feeder Profit Calculator™ (FPC): With the launch of the FPC, the beef industry now has a tool to evaluate the value of feeder calves using the known genetics and management history. The FPC comes at no cost to the producers who use this and can help cow-calf producers get paid for the investments they made into genetics and management.

Steer Profitability Contest (SPC): We are in our second year of the SPC, and I am so impressed by the engagement of these young cattle breeders. The SPC is a contest where AJSA members retain ownership on steers through harvest to see who has the most profitable steer. The SPC collects individual feed intake during the entire feeding period. The SPC hosts a monthly webinar and newsletter featuring a variety of experts from animal breeding to nutrition to feeder calf health. The SPC is a wonderful and unique opportunity for young beef enthusiasts to learn about feeding calves and collecting carcass records.

Expansion of our customer and DNA services team: Along with all these exciting programs, we have experienced tremendous growth in the services we provide. To help ensure quality customer service, the ASA has expanded the number of customer and DNA service members on our team. We sincerely strive to meet each members’ needs.

And the list could go on and on . . .

Reflecting on ASA’s novel programs and our commitment to science, technology, and delivering the best services to our membership and to the beef industry cannot be denied. It is truly an honor to work for such a philosophically sound organization. Thank you!  

jatkins@simmgene.com
Welcome to the cutting edge

Our new GGP lineup delivers amazing power to genomically enhance your EPDs.

Today, you can plan, select and manage young seedstock with the prediction accuracy of older bulls siring several calf crops. You can save years on your herd goals – for less than it costs to fill up with gas.

We not only make DNA testing easy. We make it profitable. From fast sampling of calf DNA to quick turn-around with new products that work in powerful synergy. From time-saving conveniences to a full range of innovations designed to help you take full advantage of beef genomics.

There are exciting new ways for us to work together to attain your goals with Simmental, SimAngus™, Simbrah and SimAngus HT cattle. And we would love to be your partner as you brand your legacy in the 21st Century. To learn more, contact ASA at (406) 587-4531 or visit www.simmental.org

WSFF Congress to be Held in Ft. Worth, TX

The World Simmental Simbrah Federation (WSFF) Congress will be held in Fort Worth, Texas, at the historic Stockyards, September 24–29, 2018. Room blocks are open now for booking, and the website for congress registration opens March 10, 2018. Congress registration must be completed by July 15, 2018.

Congess Headquarters Hotel:
Hyatt Place Fort Worth Historic

Additional Hotel:
Marriott Courtyard
817-885-8700
$149/night does not include breakfast

Classic Registration Integrated with Herdbook Services

For the second year, the Classic entry system is integrated with ASA's membership and registration database, herdbook.org. In order to access the Classic entry form, a junior will be required to log in with their AJSA membership number and password. Following log in, the entry system will pull animals from the registry. If the junior is not an owner or authorized representative on the intended animal's pedigree, the entry system will not allow the entry.

Members are encouraged to renew or apply for AJSA membership and process animal registrations early. Anyone who waits until the office is closed on the day of the deadline, and has an issue with a membership or animal registration, will not be able to enter the show. Any questions can be directed to ASA Youth Director, Rachel Endecott at 406-587-4531 ext. 517 or rendecott@simmgene.com.

2018 Year-Letter is “F”

The year-letter animal identification letter for 2018 is “F”, and will be followed by G in 2019 and H in 2020. The letter E was the year-letter designated for use during 2017.

Walton-Berry Graduate Student Support Grant

ASA is accepting applications for the Walton-Berry Graduate Student Support Grant, a grant that supports graduate education with an emphasis on genetic improvement of livestock. All applications must be submitted by April 15, 2018. Send all applications to Jackie Atkins at jatkins@simmgene.com.

The fund, originally started by Jim Berry of Wildberry Farms, honors Dr. Bob Walton's lifelong efforts in animal breeding and raising Simmental cattle. The Walton-Berry Graduate Student Support Grant funds graduate education in research programs to directly improve applied livestock genetics and help build future experts in animal breeding. There are two awards — one for $5,000 and a second for $3,000 for graduate education programs; each recipient contributes material pertaining to the funded research for both SimTalk and the Register.

AJSA Schedule and Deadlines

April 15 . . . . . Steers born Jan. 15-Apr. 15 are eligible for Steer Profitability Competition.
May 7 . . . . . . Regional Classic first entry/ownership deadline 4:30 pm Mountain.
May 14 . . . . . Regional Classic final entry deadline 4:30 pm Mountain.
May 14 . . . . . National Classic first entry/ownership deadline 4:30 pm Mountain.
May 21 . . . . . National Classic final entry deadline 4:30 pm Mountain
June 1 . . . . . . Photography Contest, Interview Contest, Trustee Application, Silver and Gold Merit Award application deadline.
June 12-16 . . . North Central Regional Classic, Springfield, IL.
June 13-16 . . . South Central Regional Classic, Fayetteville, AR.
June 20-23 . . . Western Regional Classic, Yreka, CA.
June 20-23 . . . Eastern Regional Classic, West Springfield, MA.
July 2-7 . . . . . National Classic, St Paul, MN.
August TBA . . . Summit Leadership Conference.

Carcass Merit Herds Wanted

Would you like to get paid to use some of the most promising young bulls in the industry? Do you have accurate and consistent record keeping? Then ASA has the program for you! The ASA is seeking additional cooperator herds for the Carcass Merit Program. Spring or Fall calving herds are welcome.

Contact Jackie Atkins or Jannine Story if you are interested in becoming a CMP herd at: carcdata@simmgene.com or call 406-587-4531.

ASA Updates DNA Test Result Notifications

The ASA has updated their process of notifying members of DNA test results. DNA test results will now be sent automatically by email from Herdbook Services when DNA has been completed on a member account. If a member does not have an email on file with ASA, the member will still receive the test results by mail.

Members may now view DNA test results by logging into herdbook.org, pulling up the animal’s pedigree, and selecting “DNA Detail” under the “Report” section. If you have further questions or want step-by-step instructions you can go to https://haveuherd.wordpress.com/ for more details.

(Continued on page 44)
Triangle J’s 2017 sale topper and stoutest bull ever produced!
AJSA Supports Keystone Food Shelves

The AJSA Board of Trustees has chosen Keystone Community Services in St. Paul, Minnesota, for the 2018 National Classic service project. Keystone’s Food Shelves program is the particular focus. Junior members are asked to collect quality, healthy, canned foods and bring them to the National Classic for the annual service project. The generosity of our members will help Keystone Community Services continue to make a positive impact in the St. Paul community.

50% off GGPLD Pricing

The ASA Board of Trustees approved a resolution to offer a 50% off rebate on GeneSeek Genomic Profiler Low Density (GGPLD) testing in exchange for either feed intake and/or carcass data. Members will receive one 50% off price discount per carcass or feed intake record submitted. Records must be valid for use in ASA’s genetic evaluation system (at least two sires represented and the animals must have at least the sire identified). Animals must have been born after August 31, 2015, to qualify for the program. Please contact jatkins@simmgene.com.

Price Increase for DNA Testing on Hair Samples

Effective immediately, due to the increased labor involved at the lab, GeneSeek has increased the processing fee for hair by $2.00 per sample. Breeders will be charged $5.00 for hair cards instead of $3.00.

ASA Requesting Cow Weights

The American Simmental Association is seeking to increase the flow of mature cow weights into its database. Cow weights provide valuable information for use in our genetic evaluation system. ASA requests that you weigh your cows close to weaning time, and, if possible, give your cows a body condition score at the same time.

Office Holiday Schedule

The ASA office will be closed for the following 2018 holidays.

- Friday, April 13: Spring Holiday
- Monday, May 28: Memorial Day
- Wednesday, July 4: Independence Day
- Monday, September 3: Labor Day
- Thursday & Friday, November 22-23: Thanksgiving
- Monday & Tuesday, December 24-25: Christmas
1. Get Your Preliminary Inventory
(should include any cow enrolled in the previous year, first-calf heifers, and purchased cows)
• Use the Data Entry section of Herdbook Services from our website www.simmental.org or complete paper inventory and return to ASA.

2. Decide which Cows will be in your 2018 Fall Calving Herd
• “Enrolled Cows” are any females of calving age, 2016 Fall-born females, and jointly owned females managed with your herd
• “Removed Cows” are any females of calving age removed from your herd. Every cow listed not given a removal code will be enrolled in your Fall 2018 herd.

3. Provide Enrollment/Removal Data

4. Decide which Payment Option Best Fits Your Herd
These rates apply for enrollments submitted by June 15, 2018

<table>
<thead>
<tr>
<th>Enrollment Fees: Registration Fees:</th>
<th>Option A (TR)</th>
<th>Option B (SR)</th>
<th>Option C (LR)</th>
<th>Option D (CM)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Registration</td>
<td>$15.00</td>
<td>$0.00</td>
<td>$7.50</td>
<td>$500/herd</td>
</tr>
<tr>
<td>Selective Registration</td>
<td>$10.00</td>
<td>$30/$40/$50a</td>
<td>$30/$40/$50a</td>
<td>$42/$52/$62a</td>
</tr>
<tr>
<td>Limited Registration</td>
<td>$5.00</td>
<td>$30/$40/$50a</td>
<td>$30/$40/$50a</td>
<td>$42/$52/$62a</td>
</tr>
<tr>
<td>Commercial</td>
<td>$500/herd</td>
<td>$42/$52/$62a</td>
<td>$42/$52/$62a</td>
<td>$42/$52/$62a</td>
</tr>
</tbody>
</table>

Choosing the best options:
If you register > 45% of your calf crop.
If you register < 45% of your calf crop and don’t use EPDs for selection decisions.
If you register < 20% and use EPDs for selection decisions.
If you have a commercial herd.

Benefits of Enrolling:
EPDs to make informative selective decisions.
Herd participates in genetic evaluation.
Reproductive record on every cow enrolled.
Commercial cows or cows of other breeds are eligible.

Requirements when enrolled:
Every registered SM/SL dam must be enrolled.
Each dam enrolled must have calf or productivity reported/year.
Deadlines to be met for enrollment and calf data.

5. Send Your 2018 Fall Inventory to ASA by June 15, 2018
• Online — using Data Entry section of Herdbook Services — www.simmental.org
• Email ASA — THE@simmgene.com
• By Mail — One Genetics Way, Bozeman, MT 59718

Call if you would like a paper inventory:
406-587-4531

### Instructions for Online Enrollment

1. Select **Herdbook Online Services**
2. **Log In** by entering
   - 6-digit member number (zero filled example: 000317)
   - Password
3. Under **Data Entry** select **Online**
4. On inventory tab, make sure year is **2018** and season is **Fall**.
5. Select **Update 2018 Fall THE Cow Inventory**
6. **Update Inventory**
   - If the dam is remaining in your herd, enter appropriate Enrollment code in **Primary Code** column.
   - If the dam has been removed from your herd, select a **Removal Code** and enter in the **Primary Code** column. To designate a second reason for removal, you may enter a **Removal Code** in the **Addtl Code** column as well.
   - A/B/C/N Enrollment Type — If you are enrolling in **Option A** — place an A in this column. For **Option B** — place a B in the column. For **Option C** — place a C in this column. For **Option D** — place a D in the column. If the cow is being removed from the herd place a N in the column.
   - **Remarks** — You may use this column if you wish to have additional remarks on a dam. This column is for member use only. ASA will not adjust enrollment based on this column.
   - **Bill Code** — This column is to be used by members to indicate how you would like to be billed for your enrollment. A “H” in this column indicates you wish to pay the full enrollment fee at time of submission. The other half of the fees will be billed later in the year. An “F” indicates to pay the full amount due on each cow for the year upfront. If bill code column is blank an “F” is assumed.
   - To add cows — Scroll down to a blank row. If you do not have a blank row, click on your last dam and hit your enter key. This will create a blank row.
   - Cows on file with ASA*, enter ASA number in **AnmRegNbr** column
   - Cows not on file with ASA*, enter tattoo in **AnmTatt** column, enter birthdate in **BirthDt** and breed(s) in **Brdcds** column.

*Please note: If your dam has had a calf reported to her or has been enrolled in THE previously, she will have a number in the **ASA system. Please type that number into the **AnmRegNbr** column so that a new dam record does not get created.

7. If there are **Errors** and/or **Warnings**
   - **Errors** (indicated in red at beginning of row) or **Warnings** (indicated in purple at beginning of row)

8. Once all cows have been given an enrollment or at least one removal code and there are not any errors, select **Submit Data**
   - A new page will display; if there are no errors, a **Proceed to Billing** link will be available.
   - Select the **Proceed to Billing** link to display a billing summary. THE is billed at the time of submission, so you will have an invoice amount due if you are enrolling in **Option A, C or D** (after the first deadline all options (A, B or C) will have a balance due).
   - Choose one of the following to complete your job:
     - If you wish to complete payment with a credit card select **Add Payment**. Enter in your credit card information. Select confirm. You will then need to select the button **Final Submit** (Only click once). A screen will then show an invoice that you can print and store in your records. It should also say **Invoice Status: Complete**.
     - If you would rather mail a check to ASA, select **Hold Until Payment Received**. A screen will then show an invoice with the current amount due that you can print and store in your records.

9. To save job and return later, select **Save and Exit**. The job will remain in an incomplete status under your account. **Please be aware that billing will work off the submission date, not the date the job was initiated.**

10. Submit your inventory by June 15, 2018, to ensure the lowest possible THE enrollment fees.

**All above enrollment information assumes inventory submission by June 15, 2018.**

By Cade Bracker, Vice-President of Marketing, Underwood, IA

I am lucky enough to be writing this article from Bozeman, Montana; the home of our amazing breed headquarters. Earlier today, I sat and looked out the window toward the mountains and took in the scenery. I began to think about where I started out in this great industry and where I hope to see myself in the future.

The future. This is something that has, for lack of a better term, been plaguing my mind for quite some time. I am currently a senior at Iowa State University and graduation in May is drawing nearer and nearer. Coincidentally, I will be participating in my last AJSA Regional and National Classic this summer. The search continues to find the perfect job that will allow me to put everything I’ve got into my last summer with cattle in the barn, and also effectively complete the duties that come with employment. While this may be extremely hard to find, I think it’s good to dream. Here are a couple of things that have helped me in my career search.

COMMUNICATE

While this is a fairly stressful time, I have had a lot of help from my friends and family. Keeping an open line of communication with family is a sure way to help alleviate frustration. Your family is a great resource to have, whether you are asking for advice or you just need a few positive words. Plus, a call home for calving updates can turn anyone’s day around. Going along with the topic of communication, don’t be afraid to reach out to friends or other connections that you have made. You never know what opportunities can come from relationships made through networking.

STAY FOCUSED

Don’t give up on finding that dream job. While your ideal position didn’t show up in your search results today, you never know what will show up tomorrow. Although these points may seem fairly simple, they have helped me immensely. Updating my family on my career opportunities and planning with them for the future will help ensure the success of our cattle operation. Keep an open mind and don’t be afraid of compromise, but never lose sight of the dream!

SimGenetics Represented at Farm Machinery Show

The Kentucky Simmental Association received many visitors at their Simmental booth at the 2018 Farm Machinery Show, on February 16 and 17, in Louisville, KY. Visitors ranged from KSA and ASA members to general public inquiring about Simmental, SimAngus™, and SimGenetics.

MSA’s 45th Annual Meeting and Sale

The 45th Annual Minnesota Simmental Association (MSA) annual meeting and sale was held at the Haas Livestock Facility, Cannon Falls, on Saturday, February 24, 2018. The weekend event started with the annual meeting of both the Adult and Junior Associations and was followed by the banquet and junior fundraising auction. The auction helped support the 2018 National Classic in St. Paul, July 2-7. The new Minnesota Junior Simmental Association Queen, Martha Moenning and Princess Madilyn Latzke were formally crowned at the banquet.

Baleigh Peterson was presented the MJSA 2018 Outstanding Senior Award.

The MSA Prestigious Travel Bell Award bell was awarded to the family of Jim & Stacy Mueller presented by the 2017 award winner Al Johnson (far left).

MISA Board members left to right, back row: Stacie Mueller, Mark Schoenfeld, Tyler Johnson; front row: Matt Pearson, Amanda Eberspacher Hilbrands, Andrea Dietz, Beth Andersland. Not photographed: Kory Bigalk, Matt Hoffman and Jared Seinola.
NEWSMAKERS

In Memoriam . . .

- **Nancy Hoovler**, Rolling Hills Farms, Belle Center, OH, age 61, passed away recently. Hoovler was actively involved in the cattle industry. An active member of ASA since 2005, Hoovler was a part of the Ohio Simmental Association, the Cattlemen’s Association and the Hardin County Cattle Producers. She is survived by her husband Robert Hoovler; children: Marcia and William Hoovler; siblings: Sandy Black, Kathy Sutter, Dean (Wanda) Durbin; and numerous nieces and nephews.

- **Howard Sargeant**, 94, founder of Sargeant Simmental Cattle Farm, Forest Lake, MN, passed away last fall. A Veteran of WWII, Sargeant served in the Army, and later founded Lakes Gas Company in 1959. A member of the ASA since 1972, Sargeant also enjoyed working on his cattle ranch. He is survived by wife, Shirley, five children; 16 grandchildren, one great-granddaughter, and many nieces, nephews, and friends.

ASA Represented at WCGALP

**Dr. Mahdi Saatchi represents ASA at one of the world’s most prestigious genetics events.**

ASA’s Dr. Mahdi Saatchi, International Genetic Solutions (IGS) Lead Genomicist, recently traveled to Aotea Centre Auckland, New Zealand, to attend the 11th annual World Congress on Genetics Applied to Livestock Production (WCGALP). Held every four years, the WCGALP draws scientists together from around the world to attend the scientific program and network with colleagues. Over 1,400 attendees representing 70 countries were at the event held in February.

Dr. Saatchi gave an oral presentation and took part in a poster session to display his work. In addition to giving presentations, Dr. Dorian Garrick, who along with Dr. Bruce Golden developed ASA’s new genetic evaluation software program (BOLT), was heavily involved in the management of the event. Frequent ASA collaborators, Drs. Matt Spangler and Bob Weaber were also in attendance.

“The WCGALP is the premier venue for the exchange and dissemination of ideas in the world of quantitative genetics,” explains ASA’s EVP Dr. Wade Shafer, “It was truly an honor for our own Dr. Mahdi Saatchi to be a speaker at the conference. He presented information on methodology that ASA/IGS has leveraged in our new multi-breed evaluation. Other researchers, including Dorian Garrick, one of the architects of IGS’s BOLT software platform, presented information on the cutting-edge methodology that is being utilized in BOLT. Our exposure at WCGALP is sure to elevate the reputation of IGS and ASA among the academic community.”

The 2022 WCGALP event will be held in Rotterdam, in the Netherlands. To view Dr. Saatchi’s paper visit simmental.org/pressreleases/MSpaper.pdf. To view the poster, visit simmental.org/pressreleases/MSposter.jpg.

Curran’s Grandfather Past NCBA President

Tim Curran, Ione, California, Western Region Trustee, found his grandfather Loren C. Bamert’s photo (second row, middle photo) in the listing of past National Cattlemen’s Beef Association (NCBA) presidents at the 2018 conference in Phoenix, AZ.

Bamert served as president from 1950-1951. He was the youngest president to serve, elected at age 38. Ten years prior to being elected as the NCBA president, he was President of the California Cattlemen’s Association. During his presidency, the Association changed its name to the American National Cattlemen’s Association.

**Semen Sale:**

Ellingson Klondike Y123, ASA# 2616685, $5.00 per straw, also Remington Lock N Load 54U. Terry Ellingson 701-741-3045.

**IT PAYS TO ADVERTISE!** Cost: $0.60 per word. Minimum 20 words per ad. Deadline: 25th of second month preceding publication. Copy: Must be submitted in writing, along with full payment. Count as one word each: entire address number; entire street; entire phone number; and entire name. Mail your classified ad copy and your payment to: the Register Classifieds, One Genetics Way, Bozeman, MT 59718.

USCA Petitions USDA

The US Cattlemen’s Association (USCA) has submitted a petition to the USDA’s Food Safety and Inspection Service (FSIS) asking the agency for rulemaking on beef labeling to clarify for consumers the difference in beef derived from cattle and “beef” products created in a laboratory.

The petition comes on the heels of Tyson Foods’ recent investments in Memphis Meats, a company creating meat from animal cells in a petri dish. Cargill also has invested in Memphis Meats.

Budget Proposes User Fees

Federal budget proposals for 2019 include legislation to impose additional user fees on meat processors. In its budget proposal for USDA’s Food Safety and Inspection Service, the administration calls for legislation to allow a user fee covering domestic inspection, import re-inspection, and most of the central operation costs for federal, state, and international inspection programs for meat, poultry and egg products.

The fee would not cover federal functions such as investigation, enforcement, risk analysis and emergency response.

Checkoff Launches New Campaign

A new producer-directed advertising campaign called “Open Doors” has been launched by the beef checkoff. The idea was to bring facts to life by taking beef producers on a journey that allows them to experience first-hand the opportunities that lie behind each door the Beef Checkoff Program has opened — and will continue to open — for the industry and their individual operations.

10-year Outlook Good

Favorable returns and robust demand provide incentives for continued growth of the US livestock sector over the next 10 years, according to the USDA.

In a new report, USDA’s Economic Research Service predicted declining feed price ratios for the cattle industry reflecting lower cattle prices and suggesting lower returns to production. Meanwhile, both domestic and global demand for meats is expected to remain strong.

Beef Exports Up

The latest beef trade data shows continued improvement in beef exports. November beef exports were 260.7 million pounds, up 2.7% over exports in November 2016. For the year to date, beef exports are up 13%.

Japan is the largest US beef export market and accounts for 29.5% of total exports for the year. Second largest in South Korea, up 6.1%. Mexico is the third largest beef export market, up 7.5%. Hong Kong accounts for 11.1% of beef exports with Canada at 10.9%. These five markets represent 82.8% of total beef exports for the first eleven months of 2017.

Low Density DNA testing through the American Simmental Association (ASA) in exchange for feed intake and/or carcass data.

- ASA Members will receive one 50% off price discount for Low Density DNA testing for each carcass or feed intake record submitted.
- Records must be valid for use in ASA’s genetic evaluation.
- All breeds and composites eligible if sire is registered in ASA multibreed database.
- Applies to animals born after August 31, 2015.
- Carcass Merit Program calves do not qualify.

Contact Jackie Atkins today for more details.
406-587-4531 or jatkins@simmgene.com
Red Meat Exports Set New Records

US red meat exports broke records in 2017, with beef export value exceeding $7 billion for only the second time and pork exports surpassing the previous year’s volume record, according to data released by USDA and compiled by the US Meat Export Federation (USMEF).

Beef exports totaled 1.26 million metric tons (mt), up 6% from 2016. This marked the fourth-largest volume on record, the second-largest volume on record and the second-largest of the post-BSE era. Beef export value reached $7.27 billion, up 15% year-over-year and 2% above the previous high achieved in 2014 ($7.13 billion).

School Lunch Program Passes Test

Stricter food safety standards for ground beef supplied to the National School Lunch Program (NSLP) are highly effective at keeping harmful bacteria out of school meals nationwide, according to a new study.

Researchers from the University of Connecticut and USDA found that NSLP-contracted meat suppliers who meet the stringent zero-tolerance standards for Salmonella and E. coli in ground beef achieved significantly better test outcomes on shipments and random tests.

US Restaurant Count Shrink

A decline in the number of independently operated restaurants is the primary reason the overall US restaurant count fell by 2% as of last fall, according to a new report from NPD Group.

A total of 647,288 restaurants were in operation across the country, after the number of independent units dropped 3% from fall 2016, the global information firm said. The number of restaurant chain units grew to 301,183 up by 982 units. The global information firm conducts a restaurant census each spring and fall.

Record-high US per Capita Meat

Production increases in beef, pork, and broiler industries expected in 2018 will likely lead to record quantities of red meat and poultry available to consumer, USDA forecasts.

For 2018, the combined per capita retail amount of beef, pork, lamb, mutton, broilers, and turkey is projected to reach 222.8 pounds, up from 216.6 pounds in 2017. The previous record was 221.9 pounds set in 2004, according to an USDA economist.

Positive Demand for Beef

Even as beef production continues to climb, demand for beef has been a positive surprise so far this year, according to the Daily Livestock Report (DLR).

In the report, DLR analysts noted that Choice beef product values have remained steady, unlike last year, when they faltered in the face of production increases. They also highlighted the role of the chunk portion of the carcass, noting atypical strength in prices.
CORPORATE REPORT

McDonald’s Making Happy Meals Healthier

McDonald’s has announced it will make improvements to its Happy Meal menu across 120 global markets to offer more balanced meals and simplify ingredients for children.

By June 2018, 100% of US Happy Meal combinations will be 600 calories or less; 100% of those meal combinations will be compliant with new nutrient criteria for added sugar and saturated fat, and 78% compliant with new sodium criteria.

Arby’s, Buffalo Wild Wings Merge

Arby’s Restaurant Group has completed a $2.9 billion acquisition of Buffalo Wild Wings (BWW) Inc., and announced that it has renamed itself Inspire Brands, Inc.

It operates more than 1,700 restaurants and franchises more that 2,900 units as Arby’s and BWW, as well as 26 units of R Taco, formally known as Rusty Taco, that BWW acquired in 2014. Annual sales for the three brands exceed $7.6 billion in 2017.

New Online Butchery Certificate Program

Butchery expert Kari Underly, known for developing new cuts for the meat industry, has launched a new business, Range Meat Academy, offering an online program certifying meat clerks. Students of the program will finish up with an “understanding of meat knowledge, cut identification, cooking attributes and the ability to communicate culinary cooking methods with the proper cut.”

Amazon Offers Two-hour Delivery

Amazon is introducing two-hour delivery of Whole Food Market groceries in four markets, with plans to expand across the US. Customers in neighborhoods of Austin, Cincinnati, Dallas and Virginia Beach, VA, can receive free two-hour delivery for orders over $35 from Whole Foods.

Shoppers select from thousands of items including meat, seafood, fresh produce, bakery, dairy, floral and everyday staples. Amazon bought Whole Foods last year for $13.7 billion, immediately lowering prices on items including ground beef and rotisserie chicken.

HSUS Leadership Resigns

The Humane Society of the United States CEO Wayne Pacelle resigned a month after the Vice President of Policy, Paul Shapiro, left the organization, amid accusations of sexual misconduct by multiple women. Their sudden departure calls into question the future of the group’s long campaign against animal agriculture spearheaded by the two.

Accusations against both former HSUS leaders were reported initially by The Chronicle of Philanthropy, followed by reports in POLITICO and the Washington Post.

Fatburger Names New CEO

Burger chain, Fatburger, has named Toni Bianco as its president and CEO. Bianco will succeed Don Berchtold, who will be transitioning to a new role as executive vice president and chief concept officer for the chain’s parent company, FAT brands.

PAT Brands currently owns five restaurant brands: Fatburger, Buffalo Cafe, Buffalo’s Express, Ponderosa, and Bonanza Steakhouses, that have 350 locations open and 300 under development in 32 countries.
Here, time is measured in generations.

That’s why you need LONGRANGE for up to 150 days of parasite control.¹

Bloodlines. You’re as proud of yours as you are of theirs. But if you used a short-term dewormer like CYDECTIN® (moxidectin) or DECTOMAX® (doramectin), you may not have been doing your genetics justice. That’s because your cows and heifers were probably reinfected with parasites just halfway through the grazing season – right when they need to gain weight to breed back and give milk.

Only LONGRANGE delivers true season-long control.¹

25.4 lbs. LONGRANGE heifers gained 25.4 lbs. more on average over those treated with DECTOMAX.²

Out here, there is no time for shortcuts. This year, think LONGRANGE.

theLONGRANGElook.com

Caution: Federal law restricts this drug to use by or on the order of a licensed veterinarian. Warnings And Precautions: For use in cattle only, not for use in humans or other animal species. Keep out of reach of children. Not for use in breeding bulls, or in calves less than 3 months of age. Not for use in cattle managed in feedlots or under intensive rotational grazing. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows, or in veal calves. Post injection site damage (e.g., granulomas, necrosis) can occur; these reactions have disappeared without treatment. Not for intravenous or intramuscular use. Do not underdose. Do not treat within 48 days of slaughter.

¹Dependent upon parasite species, as referenced in FOR summary and LONGRANGE product label.
²Results based on actual on-farm comparative demonstration. Individual herd results may vary. Data on file at Boehringer Ingelheim. Consult with your veterinarian to discuss expectations for your operation.

GeneSeek® representatives met with ASA’s DNA team to discuss current testing available in the beef cattle industry and future projects that GeneSeek and ASA can collaborate on to enhance services available for members.

Chuck and Sandy Winninger, the late Jack Winninger’s son and daughter-in-law, from Cody, Wyoming, visited ASA recently. When the Association was formed on October 14, 1968, Jack Winninger was named to the nine-member founding Board of Trustees, and was subsequently elected as the first president of the ASA. (In the early years, ASA’s highest elected official was the President. In the late 1980s, that position was officially changed to Chairman.)

Chuck and Sandy, photographed holding Jack’s portrait, dropped by on his birthday to see the ASA office and toured the building courtesy of ASA’s EVP Wade Shafer.

Rick Prins, Hopkinsville, KY, dropped by the headquarters to visit with staff. Prins is getting back into the cattle business after retiring from 30 years of military service. He plans to move back to his home state, Idaho.

Registering Foundation Animals

ASA allows breeders to register animals of other breeds in ASA’s Herdbook as long as they are registered with another breed association. There are several reasons a breeder should consider registering an animal as foundation with ASA:

- Complete parental pedigree will display on progeny registration certificate.
- Angus or Red Angus foundation progeny can receive the SimAngus™ certification.
- Creates “ties” with other offspring in the database for genetic evaluation, creating more meaningful EPDs.

At $17 for females and $25 for males, the cost is relatively minimal. Most popular AI sires of other breeds are registered with ASA as foundation sires. However, before buying semen make sure the bull is in ASA’s system, and is approved as an AI sire.

The registration process for these requests typically takes 3-4 weeks to be completed. This involves entering a 4-generation pedigree and updating genetic defect risk. If you need a foundation registration expedited, you may opt to pay the priority processing fee of $50 per head. Priority handling is normally completed within 48-hours for error-free applications.

Herd sires, AI sires, and donor dams of another breed have to meet the following DNA requirements in order for progeny to be registered with ASA free of errors:

- If an animal is at least ⅛ Maine-Anjou, Chinanina, or Shorthorn, it must be free of risk for TH and PHA.
- If an animal is at least ⅛ Angus, it must not be listed as a potential carrier or risk for AM, NH, CA, and DD.
- A High Density/150K test is required for registration of progeny resulting from AI and/or embryo transfer.
- If a foundation donor dam or AI sire has High Density test results with the primary association, those results can be forwarded by request of the owner to ASA. If an animal has SNP parent-age markers or defect test results, and is not intended for AI or donor use, these can still be forwarded to ASA.

Fact or Fiction:

I purchased semen on a popular AI sire from a reputable semen company so I can be confident the sire is approved for AI use.

Fiction: Other associations have different DNA testing requirements, set forth by their own leadership. ASA requires a High Density panel be run on all AI sires. If you find a bull to breed your Simmental cows to, first make sure he is in ASA’s system, and then call to be sure he is approved for AI use. If he is not, contact the owner or semen company to find out if they are willing to get him approved.

To register a foundation animal please send a copy (screenshot, PDF copy, etc.) of the animal’s other association pedigree by:

- email: simmental@simmgene.com
- fax: 406-587-9301
- or mail: One Genetics Way Bozeman, MT 59718.

*He’s got a simple solution for just about anything!*
Chip Kemp

Chip Kemp began working for ASA in 2015, and now serves as the Director of ASA and IGS Commercial and Industry Operations. Kemp graduated from the University of Missouri, where his undergraduate advisor, Dr. Jerry Lipsey, former EVP, ASA, became an extremely important mentor. Kemp went on to teach Animal Science at “Mizzou”, and eventually discussed working for ASA with Dr. Wade Shafer. Kemp now cites the Association’s “empowerment and impact” as reasons he enjoys his occupation.

Kemp and his wife, Nicky, have two grown kids, Tyler and Bailey — the entire family received their college education at Mizzou. Tyler now owns MK Machining, a firm focused on shooting sports, and Bailey, recently married, works with youth livestock groups, for her and her husband Zac’s business Stock Show Outfitters, and on occasion, judges swine shows with her dad. Nicky is the Assistant Superintendent for their rural school district, and grew up in the same small town as her husband. In their free time, they enjoy taking their fifth wheel everywhere they can, and often to watch friends and family show livestock.

Luke Bowman

Luke Bowman began working for ASA in 2016, serving as the Director of Member and Progress Through Performance (PTP) Operations. Bowman grew up in Indiana, graduating from Purdue University with a degree in Agricultural Education. He went on to teach high school agriculture for five years. Bowman also consulted at bull sales and was recruited by Select Sires to train staff on beef cattle breeding and genetic evaluation.

This led to dealing with breed associations and attending several association membership animal breeding conferences. Bowman had long wanted to work for a beef breed association to fulfill his passion for teaching people how to breed more profitable cattle. This piqued his interest in the science efforts of ASA, and he made a point to tell Dr. Wade Shafer that he wanted to know when a position at ASA opened up. Bowman has two kids, Oscar (4) and Georgia (2), who he loves teaching about animals and nature.

Lilly Platts

Lilly Platts has been with ASA for just over a year, working both in the processing department and for ASA Publications. She currently focuses on general processing, DNA services, editorial, and proofing. Platts is a fifth generation Gallatin County native, graduating from Montana State University with a B.A. in English writing and a minor in agricultural business. She grew up on a small ranch, where her parents ran commercial Red Angus cows, and worked for a large commercial Angus operation, the CA, which runs 1,500 pairs. She continues her involvement with the CA Ranch, and enjoys helping them brand and move cattle in the spring and fall.

Platts also shows reined cow horses and starts colts in her free time. In addition to agriculture, Platts plays fiddle for a country western band, Sam Platts and the Great Plainsmen, helps with the business side of the band, manages social media and communications for several groups and businesses, and writes freelance material. She and her husband, Sam, enjoy hanging out with their herd of dogs and playing music together.
Quantum Leap was a champion bull at nearly every major show in 2014 and 2015! Now, his first progeny are the result of the eye-appeal, body-capacity, and structural soundness that he is dominantly transmitting!

Introducing the New Y-Tags™
One-Piece Tagging System from Y-Tex®

It’s high noon for old-fashioned ear tags, because the new Y-Tags one-piece tagging system is about to run them right out of town. Y-Tags feature a revolutionary new Surgi-Tip™, advanced materials and exclusive 100% PureLaser™ imprinting for superior retention, rugged durability and readability that’s guaranteed for the life of the animal. Plus, Y-Tags are a cinch to apply, no matter what brand of one-piece tagger you like to use. To learn more about the toughest tags around, visit www.y-tex.com or your nearest livestock products retailer.

Showmanship winners with their buckles

Sponsors

Note: At the conclusion, Junior exhibitors of Simbrah, Simmental, Percentage Simbrah and Simmental competed for over $40,000 in prize monies, awards and scholarships. The event in its 26th year has now awarded almost $800,000 in monies and prizes to 1,500 plus exhibitors of SimGenetics. The show is made possible by sponsors who each put up $1,000 and junior exhibitors who purchase calves from them are eligible to compete. The event was held in conjunction with the San Antonio Livestock Show and each exhibitor was only allowed to bring one animal to the competition. This year’s event drew 168 exhibitors.

The grand champion in the Purebred Simbrah and Simmental Shows were each awarded $1,500 and the reserve champions $1,000. The grand champion in the Percentage Simbrah and Simmental Shows were each awarded $500 and the reserve champions $250. Division champions also received checks and trophy belt buckles were also awarded to each class winner, as well as monetary awards deep in each class.

For more information on the event go to www.simmental-simbrahsuperbowl.com. Also sponsorships for the 2018 event are now being accepted and posted to the website. Contact Tim Smith, 512-587-7896 or Carlos Guerra 956-383-7566 for details.

REVIVAL

Sire: Uprising  MGS: Power Drive  (tested homo black, homo polled)  Reg. #: 2913874

SEXED SEMEN IS AVAILABLE & LIMITED

Revival is the ultra-exciting, record selling purebred Simmental bull at “The One”, commanding $160,000! Cattlepersons from all breeds admired his sleek design, soundness of structure, ample muscle shape, cleanliness of joints, and “out of this world” neck extension.
For the ASA and the Simmental breed, 2018 is undeniably and deservedly a year of celebration. The ASA has kicked off the process in recognition of its 50th Anniversary since founding in 1968 with in depth coverage of the storied history of this remarkable organization. We are all grateful to the ASA team for their dedication and commitment to fill the pages of the Register with information and stories about the Founders, cattle, events and people who have contributed to the ASA’s tremendous success. We congratulate the ASA leadership and staff, past and present, for guiding our organization through both good and bad times that has allowed the ASA to survive and flourish. This was no small task!

From my inquisitive perspective, I often wonder what our young folks think as they go through the pages of the Register’s 50th Anniversary editions and see the many photos of the Simmental cattle that formed the genetic base of our breed 50 years ago. I offer this perplexing question based on my own experiences. Several times over the years, while manning our fullblood Simmental stall area at the North American International Livestock Exhibition (NAILE) in Louisville, Kentucky, I have fielded questions from youngsters as to what kind of cattle we had. I recall one example from a puzzled boy about 10 years old who said: “Daddy, the sign says Simmental, but the cows don’t look like our Simmentals”. Of course, these questions always require an attempt at explanation.

2018 marks another celebration — the 10th Anniversary of the NAILE Fullblood Simmental Show, the Pinnacle. We have successfully sustained this show at the world’s largest livestock exposition thanks to many fine people, breeders, and exhibitors who have so generously supported the program. We are also thankful to the Board of Directors, staff and members of our official sponsor, the Fullblood Simmental Fleckvieh Federation (FSFF), for all they continue to do to ensure our success. The positive and overwhelming industry response to our NAILE program has enabled us to grow in recent years to three shows. We now have a junior Fullblood heifer show, the Challenge Cup, and a crossbred Fleckvieh percentage show, the Fleck Effect™. If you have Fleckvieh influenced cattle, enter them, and show us what you have! We are committed to growing our shows and program for many years to come.

As the ASA and FSFF spend 2018 in celebration of their 50/10 year milestones, the strength of the Simmental breed in the US is at its own “pinnacle”. We, as a breed, are so fortunate to have such a wide and diverse genetic foundation that began with the introduction of the first Fullblood Simmentals five decades ago. Thanks to the dedication of many Fullblood Simmental breeders, the 2018 NAILE will once again have Fullblood “traditional” Simmentals on display and in the NAILE show ring. Please join us in Louisville from November 8th thru November 12th and celebrate with us as we offer the opportunity to see Fullblood Simmental cattle as they appeared with their first importation to the US. With the help of the ASA’s coverage and photos in the Register throughout 2018, perhaps some of our youngsters seeing these “traditional” Simmentals for the first time will not have to ask “what kind of cattle are these?” 2018 is indeed a great time to witness the 50/10 success of Simmentals in our country.

For more information about our Fullblood NAILE show and sale opportunities, please contact me at larryhmaxey@gmail.com.

Advertising Content

the Register and its staff assume no responsibility or obligation to verify the accuracy and truthfulness of advertising copy submitted to the Register. However, the Register reserves the right to reject any advertising copy or photo which the Register deems unsuitable for publication for any reason, including copy or photographs which are false or misleading. the Register assumes no responsibility for the accuracy and truthfulness of submitted print ready ads. Advertisers shall indemnify and hold harmless the Register for any claims concerning advertising content as submitted. Advertising containing pedigrees or statements regarding performance must conform to records kept by the American Simmental Association. Copy deviating from official records may be changed as necessary without advertiser consent.

Editorial Policy

Opinions expressed are the writers’ and not necessarily those of the Register. Photographs are welcome, but no responsibility is assumed for material while in transit or while in the office.

ASA PUBLICATION, INC

One Genetics Way
Bozeman, Montana 59718 USA
406-587-2778 • Fax 406-587-8853
register@simmgene.com

Send all ad materials to: register@simmgene.com or Fax: 406-587-8853

A non-refundable fee of $50.00 will be assessed if a client does not meet deadlines or if the client commits to advertising and cancels after the deadline or if the ad must be dropped to ensure on time publication.

Advertising materials (including photos) must be in the Register office by the dates listed above. the Register, which mails by periodicals rate, assumes no responsibility for actual receipt date.

Design Charges

Advertising rates are for camera-ready ads only. Additional design charges will apply to any ad that is designed by ASA Publication, Inc.

Layouts & Proofs

Although every effort will be made to provide proofs on all ads, proofs are guaranteed only if all ad material arrives in the Register office prior to deadline.

Terms

All accounts are due and payable as invoiced. Interest charges of 1.5 percent per month (18 percent APR) will be added to accounts 30 days past due. If an account becomes 60 days delinquent, all ASA Publication, Inc. work may be suspended until full payment is made. After review by the ASA Executive Committee, ASA privileges may be denied to those with accounts over 90 days delinquent.
IT TAKES MORE THAN A LITTLE LUCK TO KEEP CALVES HEALTHY.

It takes the power of Pyramid® 5 + Presponse® SQ, the only approved combination vaccine that protects for at least 217 days against BVDV Type 1b — the most common subtype of BVDV in infected calves. Vaccination provides a protective effect against the development of post-challenge viremia and leukopenia. Choose the viral and bacterial protection of PYRAMID 5 + PRESPONSE SQ, and realize that luck has nothing to do with raising healthy, high-returning calves. Talk with your Boehringer Ingelheim representative today.

2. a. Continuous or duration of life.

---

**Sire:** ASR/GLS Pacesetter by Hooks Pacesetter  
**Dam:** ASR Primrose M231 by ASR Showcase by ER Black Cisco

- The cattle are gentle and quiet, giving him a Docility score (DOC) ranking him in the top 20% of the breed and in the top 3% of the breed for Stayability (STAY). These traits heavily influence the All Purpose Index (API). ASR Longevity ranks in the top 10% of the breed for API.

- ASR Longevity was enrolled in the Carcass Merit Program (CMP) and ranks in the top 15% for Marbling and top 4% for Ribeys. His top 10% growth for Weaning and Yearling Weight EPDs and carcass traits rank ASR Longevity in the top 10% for Terminal index (TI).

- The real plus of ASR Longevity Y184 is his maternal strength. His grand dam raised 14 calves. His dam is still in production and recently calved with her 14th calf. He ranks in the top 10% for Maternal Calving Ease (MCE). Ideal for making SimAngus™ halfbloods. Outcross for many of the current Simmental pedigrees.
